**STEEL DOORS  
CATALOGUE**

Our Homeefe door brand combines beauty and class design, helping our customer get what they want every time. Our leading designers and contractors are focused on providing doors with the highest quality of aesthetics, functionality and most important safety for our clients.

We create and design for people to match their needs and ideas, with our wide range of available products combined with architecture design, attractive prices and materials from which Homeefe doors are made are crucial with much focus on practical, safety and aesthetic details. Their class and beauty is enhanced even further when finished with such accessories as sidelights, bar handles, thresholds and INOX trim.

Our clients sleep easily knowing that their family safety and overall satisfaction will be fully cared for with products such as external steel, anti-burglary and fire-resistant doors, manufactured for houses and residential areas, as well as commercial and industrial buildings. Our products provide effective protection against many threats, with unrevealed product value for quality. Homeefe doors are made providing many years of functionality, durability, resistance to moisture, weather conditions and in result many years anticorrosion qualities. Solid construction and modern design are satisfying the demands of all our customers who care about comfort, safety of their family and acquired taste. Other accessories such as traditional door viewer or digital viewer with LCD screen also meet their requirements.

Our attention to details is also visible in the Homeefe steel door collections: FORTE 92, GRANDE PLUS, GRANDE 68.

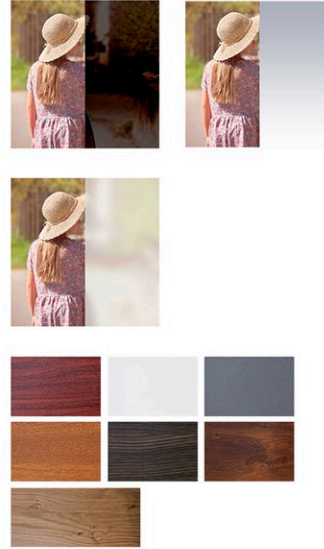

These include single and double leaf doors (full and glazed with flat, toughened, frosted, mirror, brown reflex & graphite reflex glass) with thickness from 68mm to 92mm.

All of our beautiful steel doors are manufactured in attractive colours made to much the buildings design such as Golden Oak, Anthracite, Walnut, White.

Our designers, employees and associates at Homeefe are continually providing new improved solutions to meet expectations of our clients and reinforce our brand market recognition, quality and overall price.

## SINGLE LEAF FLAT DOOR

### TECHNICAL SPECIFICATION

#### FORTE 92 ( 92 mm ) SINGLE LEAF FLAT DOOR

Door leaf	weight per full 900 mm door	48 kg
	door thickness	92 +/- 1 mm
	filling	PUR foam
	steel sheet thickness	0,7 mm
	coating type	PCV venner
	anti-theft bolts	3
	rebate	4 way
	rebate thickness	19 mm
	rebbet thickness	49 mm
	thermal transmittance	full $\lambda=0,74 \text{ W}/(\text{m}^2 \cdot \text{K})$ glazed $\lambda=1,0 \text{ W}/(\text{m}^2 \cdot \text{K})$
Hinges	type	3D hinge
	coating	white zinc
	class	7
	quantity	3
Lock	hook locking strip with profile cylinder	

 Door thickness **92 mm**

 Door width **90 cm**

**27 dB**  
Noise coefficient 

**0,74 W/(m<sup>2</sup>K)**  
Heat transfer coefficient 

#### CAUTION

The noise and thermal transmittance coefficient applies only when full doors are used as part of a set together with a wood-aluminum frame (ENERGO warm).

#### FORTE 92 ( 92 mm )

Size	Door frame inside width	Door frame inside height	Door + door frame width	Door + door frame height	Doorway width in wall	Doorway height in wall
900 mm	900 mm	2000 mm	1060 mm	2100 mm	1080 mm	2110 mm

We do not shorten this door 

**ENERGO FRAME** 

#### DOOR CONSTRUCTION

The FORTE 92 full or glazed door is made in a rebated version, 92 mm ± 1 mm thick. The outer surface is made of the highest quality hot-dip galvanized steel sheet, covered with PVC veneer. The surface is protected with an additional layer of plastic, which should be removed immediately after door installation. The thermal insulation filling is made of polyurethane foam. The door has a wooden rail mounted around the outside. As standard, the doors are equipped with a Winkhaus hook lock with a spacing of 92 mm for a profile cylinder. The door is fitted with three anti-theft bolts. The standard accessories include a set of INOX or black hinge covers.

The door frame is made of glued pine wood, covered with moulded aluminium and covered with PVC veneer in the colour of the door, with a thermal threshold (aluminium with a plastic insert). A high-quality, pressed-in seal in the door and frame ensures the tightness and quiet operation of the door. The doors are made with a 4-sided rebate system, paired with 3D hinges. These doors are intended for installation externally in residential, commercial and industrial premises. They are resistant to deformation, weather conditions, have a reinforced steel structure and high resistance to moisture.

#### GLAZING

Decorative glazing with INOX stainless steel frames, the structure is brushed and powder coated. Their distinguished style is free from the disruption of corner joins and without frame hole cover caps on the inside. Flat, toughened glass, 92 mm thick, is available in the MIRROR, REFLEX and MILK versions. Ceramic glazing in the DIP panes is made with ceramic digital printing technology, hardened through a toughening process, combined in a package with anti-solar (reflective) glass.

INOX frames should be maintained every six months using a product designed for stainless steel cleaning and maintenance. Hinge covers available in INOX or BLACK colours.

### DOOR CONSTRUCTION

The GRANDE PLUS full or glazed doors are made in a rebated version, 68 mm ± 1 mm thick. The outer surface is made of sheet metal, covered with PVC veneer. The surface is protected with an additional layer of plastic, which should be removed immediately after door installation. The thermal insulation filling is made of expanding polystyrene. The door has a wooden rail mounted around the outside and reinforced at the hinges and locks. As standard, the doors are equipped with a Winkhaus hook lock with a spacing of 92 mm for a profile cylinder. The door is fitted with three anti-theft bolts. The door frame is made of galvanized steel sections, covered with wood effect laminate. We recommend buying the ENERGO door frame. A high-quality, pressed-in seal in the door and frame ensures the tightness and quiet operation of the door. The doors are made with a 4-sided rebate system, paired with 3 triple hinges used for burglary resistant doors. These doors are intended for installation externally in residential, commercial and industrial premises. They are resistant to deformation, weather conditions, have a reinforced steel structure and high resistance to moisture.

### GLAZING

Decorative glazing with INOX stainless steel frames, the structure is brushed and powder coated. Their distinguished style is free from the disruption of corner joins and without frame hole cover caps on the inside. Flat, toughened glass, 68 mm thick, is available in the MIRROR, REFLEX and MILK versions. Ceramic glazing in the DIP panes is made with ceramic digital printing technology, hardened through a toughening process, combined in a package with anti-solar (reflective) glass.

INOX frames should be maintained every six months using a product designed for stainless steel cleaning and maintenance.

### DOOR CONSTRUCTION

The GRANDE 68, GRANDE 68 FLAT full or glazed doors are made in a rebated version, 68 mm ± 1 mm thick. The outer surface is made of the highest quality hot-dip galvanized sheet metal, covered with PVC veneer. The surface is protected with an additional layer of plastic, which should be removed immediately after door installation. The thermal insulation filling is made of expanding polystyrene. The door has a wooden rail mounted around the outside and reinforced at the hinges and locks. As standard, the doors are equipped with two 3-bolt locks with a profile cylinder. The door is fitted with three anti-theft bolts. The door frame is made of galvanized steel sections, covered with wood effect laminate. We recommend buying the ENERGO door frame. A high-quality, pressed-in seal in the door and frame ensures the tightness and quiet operation of the door. The doors are made with a 4-sided rebate system, paired with 3 triple hinges used for burglary resistant doors. These doors are intended for installation externally in residential, commercial and industrial premises. They are resistant to deformation, weather conditions, have a reinforced steel structure and high resistance to moisture.

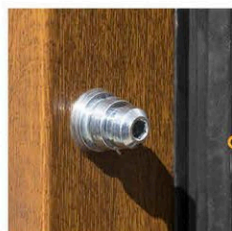

### GLAZING

Decorative glazing with INOX stainless steel frames, the structure is brushed and powder coated. Their distinguished style is free from the disruption of corner joins and without frame hole cover caps on the inside. Flat, toughened glass, 68 mm thick, is available in the MIRROR, REFLEX and MILK versions. Ceramic glazing in the DIP panes is made with ceramic digital printing technology, hardened through a toughening process, combined in a package with anti-solar (reflective) glass.

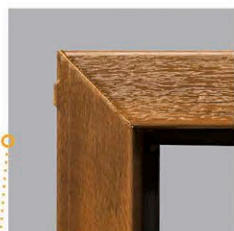

INOX frames should be maintained every six months using a product designed for stainless steel cleaning and maintenance.

# INTEGRATED HANDLES

NEW QUALITY OF SETTO VDV AND HAGA VDV FITTINGS

## FASTER INSTALLATION

Handle integrated with plate -two screw kit assembly as the integrated handle is installed by fixing only 2 screws. An additional help is the universal properties of the handle - it doesn't matter whether the door is right or left handed, because the Setto VDV and Haga VDV handles are suitable for both.

## EASIER TO OPERATE

Universal assistance for left and right hand doors due to the integration of elements, there is no need for a pressure screw which previously commonly caused difficulties with operation

## RELIABILITY

Minimised risk of handle coming loose or dropping no need to use a pressure screw which improves reliability, thanks to this the new integrated handles are ideal for rooms with high traffic.

SETTO VDV and HAGA VDV integrated handles are suitable for left and right doors. Low degree of deformation with a load of 1000N > 0.75mm. Possible spacing of 72 mm and 92 mm. 2 fastening screws in hardened sleeves, not accessible from the outside. Suitable for doors with a thickness of 68 mm to 92 mm. A significantly thicker and stronger spring located in the handle.
